Relationship of Nurse Station and Cubicle Setting

Centralized Design

Hybrid Design with Decentralized Work Stations

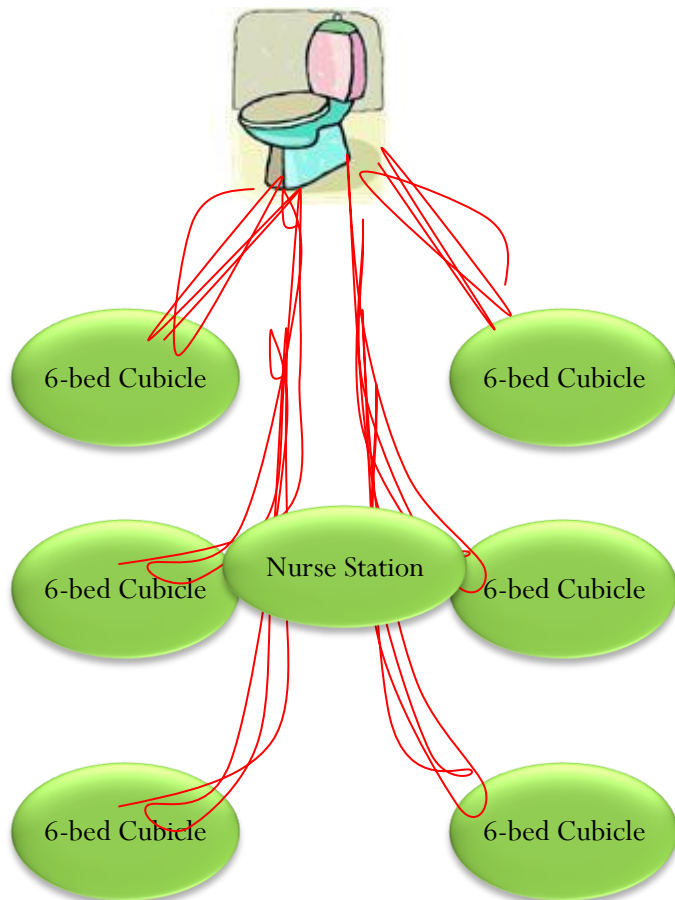

Benefits of Hybrid Design with Decentralized Work Stations:

- reducing staff fatigue due to frequent travel between nurse station and patient cubicle in the course of their work.
- enhancing patient monitoring and increase the time as well as interaction with patients / relatives.
- providing more working space for staff and ease of access to computer system.
- minimizing the potential risk of misplacing patient record to other patient folder in a busy and crowded nursing station with multiple users.

Relationship of Patient Toilet, Patient Cubicle and Nurse Station

Centralized Design

Decentralized Design
