Expanding Nurse's Roles and Strengthen Clinical Collaboration to Accomplish

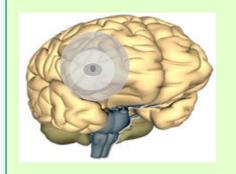

Cluster-Based 24 hours Thrombolysis Services

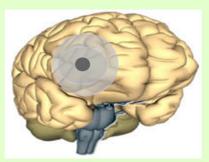

New Territories East Cluster (NTEC)

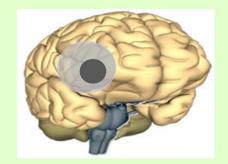

Time is Brain
The extent of viable **brain** tissue decreases with **time**

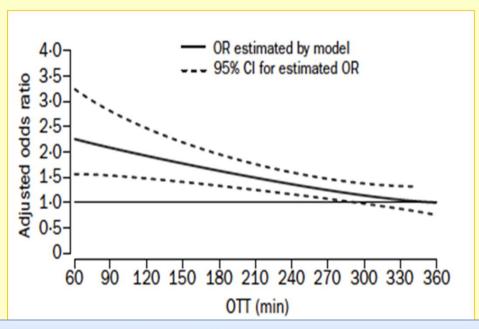

Exclude Stroke Mimics	
Migraine	Metabolic
Tumor	Epilepsy
Demyelination	

Prudent screening for eligibility Keep short onset to treatment time

3 Hospitals

PWH
AHNH
NDH

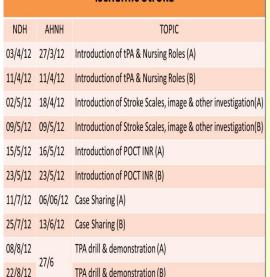

Check eligibility and carry out assessment Assist administrate tPA through the most appropriate route

Objectives of the program:

- 1. Quality training to experienced nurses in neurosciences
- 2. Strengthen clinical collaboration between nurses and neurologists
- 3. Building teams of tPA nurses in PWH, AHNH and NDH

Methodology:

- (1) Focused training to nurse in EDU and ASU
- (2) Devise guidelines and revise
- (3) Bedside coaching and seminars by nurse consultant
- (4) Neurologist conducts clinical skill assessment for nurses
- (5) Encompass tPA and screening at AED into nurse's tertiary training
- (6) Exercise the Tele-Stroke operation

In House Training on Thrombolysis in Acute

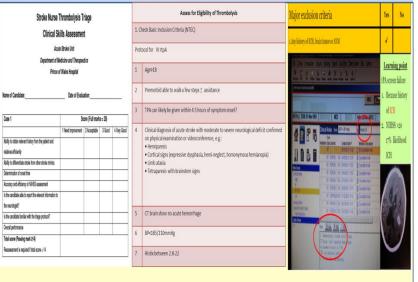

ischemic Stroke

Lectures and bedside coaching

Clinical Skill Assessment by Neurologist

Screening for eligibility using electronic patient record

Result & Outcome:

- 1. 24 hours tPA service is implemented in PWH since August 2012.
- 2. AHNH and NDH follow the drip and keep principle; providing tPA treatment during office hours.
- 3. tPA was incorporated into all tertiary neurosciences training by Institute of Advanced Nursing Studies from 2009 onwards.
- 4. At total 13 nurses passed the credentialing in 2012
- 5. At present, there are 20 nurses undertaking the bedside coaching and related learning activities in NTEC.
- 6. Nurses partner with neurologists in provision of tPA service through telemedicine

Conclusions:

- tPA nurses are practicing advanced roles and their commitment is essential for implementation of 24-hour thrombolysis treatment.
- ♦ A strategic nurse-physician partnership and their mutual support are fundamental
