

Application of Robotic Therapy *in* Upper Limb Training *for* Stroke Patients

DORIS LAM

Occupational Therapist I

Occupational Therapy Department, Tuen Mun Hospital

Hospital Authority

Hong Kong

Outline

Stroke Rehabilitation

- A major health issue in Hong Kong

- Entails various degrees of motor and functional deficits, adversely affecting survivors' community living and quality of life

- Functional training of the paretic limbs has been a focus.

- Majority (70-80%) of stroke survivors fail to attain full recovery in the paretic arm (Khandare et al, 2013)

Evidence-Canadian Best Practice Recommendation for stroke Care (2012)

1

Stroke patients should receive through an individualized treatment plan, a minimum of 3 hours of direct task-specific therapy for a minimum of 5 days per week (Evidence Level A)

2

Repetitive & intense task-oriented therapy is effective in promoting recovery in both acute and late phase of stroke rehabilitation (Evidence Level A).

3

Higher intensity in terms of longer, more frequent training is associated with better rehabilitation outcomes.

There is strong (Level 1a) evidence that repetitive task specific training techniques improve measures of upper extremity function.

1

Repetitive task

2

Specific Movement

3

High intensity of training

Induced
neuroplastic
changes

Liepert et al, 2000

Neuroplasticity / brain Plasticity

Definition: The capability of the brain to reorganize by forming new neural connections throughout life.

- It allows the neurons in the brain to compensate for injury and disease and to adjust their activities in response to new situations or to change in the environment
(*Dr. H. El Sharkawy*)

- Motor recovery programs should include meaningful, repetitive, intensive and task-specific movement training in an enriched environment to promote neural plasticity
(*T Nao & Shin, 2013*)

Robotic Therapy

Robotic Therapy in Upper Extremity

An upper limb robotic therapy in rehabilitation is an external device that assists or guides movement with the intention of improving function

Presents virtual reality (VR) games and tasks to the patient that can be adjusted to level of ability, interest and specific movement problems

Theoretical Benefit of Robots Therapy in Upper Extremity

Point 1

Robot will allow the patient to achieve a task

Point 2

Repetitive goal orientated practice requiring attention

Point 3

Tasks can be adjusted to provide success at the limit of performance

Jane Burridge, 2013

Theoretical Benefit of Robots Therapy in Upper Extremity

Point 4

Motivating and varied – VR / games
(less boring)

Point 5

Allows intensive and safe training

Point 6

Appropriate for all levels of ability

Jane Burrridge, 2013

Theoretical Benefit of Robots Therapy in Upper Extremity

Point 7

Robotics is an area of interest in stroke rehabilitation

Several studies have reported improvements in strength and motor function with robotic treatment (Burgar, Lum, Shor, & Machiel Van der Loos, 2000; Finley et al., 2005).

Effects of robot-assisted therapy on stroke rehabilitation in upper limbs: Systematic review and meta-analysis of the literature

Conventional
Therapy

VS

Robotic Assisted
Therapy

Result

Point 1

When the duration/intensity of conventional therapy is matched with the robot-assisted therapy, no difference in motor recovery, ADL, strength, and motor control.

Point 2

Extra session of robotic therapy in addition to regular therapy are more beneficial than regular therapy alone

Robotic Training Program in Tuen Mun Hospital

Rehabilitation Stroke Unit

Inclusion Criteria

Principal diagnosis in stroke

The Functional Test for the Hemiplegic Upper Extremity (Hong Kong) Level II to level VI

Exclusion Criteria:

MAS score for shoulder and elbow equal or more than 2

Pilot Study in Tuen Mun Hospital

Rehabilitation Stroke Unit

Time : February 2010 to July 2011

Number of subject : 41

Intervention : Conventional Therapy + Robotic therapy

Outcome measure: The Functional Test for the Hemiplegic Upper Extremity (Hong Kong) FTHUE

Result

32 Subjects have increased FTHUE level.

FTHUE level II to level IV patients showed greatest improvement among different groups of upper limb level after completing the Robotic Arm Training

Program Implementation

Attend training session 5 days per week

Duration : 30 minutes Armeo Spring training and functional training

A Associated reactions	Level 2
B Hand into lap	
C Arm clearance during shirt tuck	Level 3
D Hold a pouch	
E Stabilize a jar	Level 4
F Simulated wringing a rag	
G Blocks and Box	Level 5
H Eat with a spoon	
I Box on Shelf	Level 6
J Drink from glass	
K Key turning	Level 7
L1 Use chopsticks (dominant hand)	
L2 Clip cloth peg (non dominant hand)

The Efficacy of Robotic Therapy on Improving Hemiplegic Upper Limbs Function by Using a Stratified Protocol of the Armeo Robotic Devices

Kowloon Hospital

Objectives:

(1) To develop a treatment protocol based on Armeo Robotic Therapy, that benefit the stroke patients at different levels of upper limb function (FTHE-HK)

(2) To test the pre and post treatment intervention effect on patients based on (1)

- 48 subjects and classified into three treatment groups.
- According to the level of Functional Test for the Hemiplegic Upper Extremity.
- Group 1 is functional level 2.
- Group 2 is functional level 3 and 4.
- Group 3 is functional level 5 and 6.
- The outcome measures includes Fugl Meyer Assessment, grip power and the data gathered from the robotic device.

Training modules for Group 1 : UL functional level 2

Minimum Motion of the level 2			
Some beginning voluntary motion of the shoulder and elbow			
Therapy Plan with autogrip on, total 45 min. program			
Game	Workspace	Level	Time
Rain Mug	1D	4 level	3 min @
Vegetable Grater	1D	4 level	3 min @
Window mopping	2D (frontal plane)	V easy & easy & medium	3 min @
Stove cleaning	2D (hori. plane)	medium	3 min @
Popping air	2D (frontal plane)	V easy & easy & medium Easy	3min

Training Modules for Group 2 : UL functional level 3-4

Minimum Motion of the level			
Level 3	30-60° shoulder flexion 60-100° elbow flexion 3-5lb gross grasp		
Level 4	>60° shoulder flexion, > 100° elbow flexion and some extension, 3-5lb gross grasp,1/2 – 3 lb lateral pinch		
Therapy Plan with autogrip on, 45 min session

中風病人上肢康復治療新法

機械臂+打機練肌肉

【本報訊】電子及虛擬現實遊戲正流行於年輕人社群，更有熱中癡癡人向上述康復治療。九龍醫院利用生命遊戲模擬器，加上虛擬現實遊戲與物理治療方法，為患者提供上肢訓練，減輕肩肘痠痛。科基有在治療上就可變成遊戲練習，更有病人可透過遊戲訓練，解決引入兩臂已有痠痛中出現病人接受。

九 根據地球觀測主要報告內容顯示，雖然中溫層內的熱力作用極度複雜，為前人士認為極難瞭解，但對地球中溫層變遷，可經由衛星探測得知，對氣候學有裨益。因此，該部曾於中溫層及與中心氣旋系關係密切地區，舉「南海海空巡邏」及「總統杯」等，進行「南海海空巡邏活動」，為「國際氣候變遷」。

高麗參自古被稱為滋補聖藥，是發現其藥效結合的產科奇藥。根據結果顯示，對產後失調，可產後給予高麗參。

動、例如以「讀書」為洗手、擦臉及沐浴、十字字等象徵和子等。活動則以複雜的動作上其活動。則可象徵以「讀書」，如擦臉及沐浴、遊戲也可象徵其不同語言。其意含在變化的動作時，其以有效而表達。

里著北平冠博士成

東京京王線有兩條鐵道線，一條是普通車到站的上落區內停車，另一條是特快車，在車站前停留站而略過其他各站。我和平之助乘坐進入人羣，負責上落區內指定停站的地點，兩人讀的告示，45 年中長度若干不能提高，最初只是從傳統型製造，去年開始轉手到電氣，（現則轉到轉手）。這種電氣若干不能提高而增加位置，而且「看好快呢，舊快呢」。

新科技令患者更投入

恢復中風病人上肢功能

機械臂治療見效

以恢復中風病人的上肢功能，郭嘉祺獲一批枯癱的手部進行針灸治療。為了加強療效，九龍醫院率先使用機械臂，電療法等非傳統療法。兩年來為1140個個案進行治療，發現上肢肌肉漸漸恢復彈性，活動力亦不會額外增加病人的腦皮層。

傳授上列專業課程則由該校醫學系教授負責。此外傳授雙手操縱車上英文術。由九層樓醫院以江秋人的助理陳元。教授共有三或四人上車部員課。

九龍醫院利德院區療法

林南於2007年正式成立南陽地產經紀研究中心，透過與業界持續的聯繫，加強經營、培訓傳訊及專業化，期望其能為地產經紀行業帶來正面影響，令社會保障健全。

[illegible]

引入機械臂亞洲第一

這顆雙子座南極星，是針對性關節炎而研製，透過人工關節置換手術與物理、化學和手術治療，以進行手術後期的活動。不過，這種骨質增生和痛風和扁平足的問題病人不適用。她補充，2006年清濟工大學合本研製新藥病人，以探討上述兩項的治療成效，結果會於2016年中完成，預期可改善關節炎發展。

一而即對新加坡和馬來西亞都會造成嚴重影響，甚至影響經濟，而新加坡更影響海峽的經濟能力，他們就要求美國和英國對新加坡施壓，治罪與美國海峽商會競爭，給新加坡商會造成不利影響以致於日常業務。另外，在經濟上的影響，是通過新加坡，讓新加坡人對其經濟和互動關係瞭解中，以訓練其能力，從而和平發展。

訓練一月中風手臂靈活

3月的舊金山中國城，紅紅綠綠，當時似乎曾被趕到投訴的政黨，就試法四處上座，並坐在月門前看黃鼠狼進入籠籠的舊城黃鼠狼打呼。黃鼠狼1天，每次訓練1小時，1個月後，牠的紅毛已與舊金山黃鼠狼，漸漸的從廣大增至舊金山。他說：「比那更難費自己便手運動到中國城，成效不大，舊城黃鼠狼有命救，電視在舊金山，下月再回舊金山，幫牠們工作！」

吳國榮表示，動用再生資源法處理廢物，可和平地解決非法，因為該法可進行和平地處理，但非法處理則屬非法。他表示，政府應關注非法處理，但更應關注非法處理的根源，並加強宣傳，使市民更了解非法處理的嚴重性，並加強宣傳。

中國工銀國際華富基金

史國良二次被禁中飽受黃老生、沈其明等非法第一次牢獄。他於給予他不能動彈、連睡床都不准睡、并於床中加手、2009年10月被關押及於禁室中受刑。現在他到這座監獄時非常害怕的若手、於是其聲望加強意識的保己而逃。經過這次事件後開始訓練、自能兩次轉手、寫信、寫自傳七成的手語活動能力、他認為對未來非常樂觀。

2000年12月

Practice of task-oriented & functionally relevant actions

Feeding

**Grab for Support in
Transfer / Ambulation**

**Dressing,
Buttoning ...**

**IADL – Cooking,
Opening door**

ATM, handling \$

People FIRST. Fairness. Innovation. Respect. Teamwork.

Robotic Therapy – Added Value

More 'reproducible' motor experience

Less demanding for therapists' adjustment/hands on intervention

More interesting and motivating to patients
Increase collaboration, motivation, and effort by the patients

Increased variety of therapeutic modalities for patients.

Future Development

- **Conventional → Robotic therapy?**
- **Robotic + Conventional therapy**
- **Specific patient group: Minimal Proximal Control**
- **Robotic therapy for distal control: new equipment (e.g. Hand of Hope)**
- **Carry over effect: motor gain → functional gain**
