Introduction
Providing quality wound care for the patients starts with a good understanding of wound care principles. In order to provide continuous update wound knowledge for staff in the department, a series of round-robin wound care update seminars were organized by the Surgical Wound Care Team. Periodically wound assessment and management audit can be proceeding smoothly and effectively.

Objectives
(1) To provide update knowledge to staff on basic wound assessment and management according to the Surgical Wound Manual; (2) To provide update knowledge on special wound management strategies; (3) To evaluate the results with periodically audit.

Methodology
A series of 12 seminars on wound assessment, management and advanced wound care strategies were designed. The seminars were organized monthly started from June, 2014 till now with total 8 sessions were completed. Different speakers in the department were being invited and CNE were successfully applied. In order to incorporate with the periodically departmental audit on wound assessment and management, the series were designed in a round-robin schedule through-out the year for staff training. Evaluation questionnaires had been designed for obtaining feedback and comments.

Result
Total 168 staffs had attended the 8 seminars till now with average 21 staffs per class. Total 8 CNE points were approved (1 point per class). Total 153 evaluation questionnaires had been received (Average response rate: 91.07%). Over 70% staffs
agreed that the seminar had achieved its objectives with useful content. Over 80% staffs were fully understood the content and found the presentation satisfactory. Staffs were competence in performing and handling the audits on wound assessment and management. Our evaluation results reveal that the regular intensive wound care update series are effective education model in Surgical units.
