Introduction
To develop mechanism to increase compliance of scheduled review of End of life (EOL) care plan and DNACPR.

Objectives
1. To strengthen review process of EOL care plan policy in LKB.
2. To enhance the compliance rate of scheduled review of EOL care plan.
3. To implement DNACPR and monitor the compliance rate of scheduled review.

Methodology
1. Formulated an EOL care plan working group in LKB to discuss & implement the action plan.
2. In 1st phase (4 Mar - 11 Jun 2014), established an EOL review system with implementation of interventions:
   2.1 Reviewed Interdisciplinary team care conference record with EOL care plan information added
   2.2 Developed ward-based master patient list of EOL
   2.3 Developed Cue card with due date of review
   2.4 Attached Flag label on EOL care plan
3. In 2nd phase (6 Oct 2014 - 17 Jan 2015), DNACPR was implemented on 6 Oct 2014. Besides added "DNACPR" in above action plan, DNACPR & EOL were kept in a File with Flag label. Moreover, there were 2 more interventions:
   3.1 Add "EOL" in Daily patient care plan in LKB.
   3.2 Add "DNACPR & EOL" in Nursing handover sheet in LKB.

Result
1. The DNACPR & EOL review system was well established in LKB. It can strengthen staff awareness on reviewing DNACPR and EOL.
2. The overall compliance rate of scheduled review on EOL was greatly increased from 49.2% (4 Mar 2014) to 90.8% (11 Jun 2014) after 3 month interventions. The trend of compliance kept 92% on 6 Oct 2014 with implementation of DNACPR. Afterwards, all wards yielded 100% compliance on 17 Jan 2015.
3. Six interventions were continued to be used in LKB as a reminder to staff on DNACPR and EOL care plan.
