

Factsheet of Primary Brain and Other Central Nervous System Tumour Statistics of 2018

2018年原發性腦部及其他中樞神經系統腫瘤統計數據摘要

Introduction 引言

To provide accurate population-based local data of primary brain and other central nervous system (CNS) tumours, the Hong Kong Cancer Registry has enhanced the Brain and CNS Tumour Registry (BCTR) to collect the data of both malignant and non-malignant CNS tumours. The definition of primary brain and other CNS tumours used by the BCTR includes all tumours originated in the brain, spinal cord, meninges, cranial nerves, pituitary gland and pineal gland¹. This factsheet summarises the population-based statistics on primary brain and other CNS tumours newly diagnosed in 2018.

為了準確地提供以本地人口為基礎的原發性腦及其他中樞神經系統腫瘤的數據，香港癌症資料統計中心強化了腦部及中樞神經系統腫瘤登記，收集更全面的惡性與非惡性的中樞神經腫瘤數據。資料庫登記的原發性腦及其他中樞神經系統腫瘤包括所有起源於腦、脊髓、腦膜、顱神經、腦垂體和松果體的腫瘤¹。本摘要旨在簡介本港2018年新增的原發性腦及其他中樞神經系統腫瘤個案的統計數據。

Summary 概要

- In 2018, approximately 23.6% of all newly diagnosed primary brain and other CNS tumours were malignant and 76.4% were non-malignant, making non-malignant tumours over three times more common than malignant tumours.

在2018年，約有23.6%新確診的原發性腦及其他中樞神經系統腫瘤為惡性腫瘤。而非惡性腫瘤則為76.4%，發病率是惡性腫瘤三倍以上。

- While the overall crude incidence rate of malignant primary brain and other CNS tumours was higher in male (4.2 versus 3.0 per 100,000 population), that of non-malignant primary brain and other CNS tumours was higher in female (13.3 versus 9.4 per 100,000 population).

儘管男性的原發性腦及其他中樞神經系統惡性腫瘤的粗發病率較女性為高（每100,000人計，男性及女性發病率為4.2比3.0），女性的非惡性腫瘤粗發病率卻較男性高（每100,000人計，女性及男性發病率為13.3比9.4）。

- The most common malignant primary brain and other CNS tumours was glioblastoma (11.2% of all tumours and 47.5% of malignant tumours), while the second most common one was diffuse and anaplastic astrocytoma (3.1% of all tumours and 13.2% of malignant tumours). The third most common malignant tumours were oligodendrogloma (including anaplastic oligodendrogloma; 1.7% of all tumours and 7.2% of malignant tumours) and ependymal tumours (1.7% of all tumours and 7.2% of malignant tumours). Male had more oligodendrogloma (No. 3) whereas female had more ependymoma (No. 3). The proportion of histologically confirmed malignant cases was 83.4%.

膠質母細胞瘤為最常見的原發性腦及其他中樞神經系統惡性腫瘤（佔所有腫瘤的11.2%和惡性腫瘤的47.5%），

而第二常見的則為瀰漫性和間變性星形膠質瘤（佔所有腫瘤的3.1%和惡性腫瘤的13.2%）。寡樹突神經膠質瘤（包括間變性寡樹突神經膠質瘤；佔所有腫瘤的1.7%和惡性腫瘤的7.2%）和空管膜細胞瘤（佔所有腫瘤的1.7%和惡性腫瘤的7.2%）同為第三常見的原發性腦及其他中樞神經系統惡性腫瘤，而男性比較多患上寡樹突神經膠質瘤，空管膜細胞瘤則在女性較常見。經組織學確診的惡性腫瘤個案比例為83.4%。

- The top three commonly occurring non-malignant tumours were meningioma (37.6% of all tumours and 49.2% of non-malignant tumours), tumours of the pituitary (13.1% of all tumours and 17.2% of non-malignant tumours), and nerve sheath tumours (12.9% of all tumours and 16.9% of non-malignant tumours).

三種最常見的非惡性腫瘤分別為腦膜瘤（佔所有腫瘤的37.6%和非惡性腫瘤的49.2%）、腦垂體腫瘤（佔所有腫瘤的13.1%和非惡性腫瘤的17.2%）和神經鞘瘤（佔所有腫瘤的12.9%和非惡性腫瘤的16.9%）。

- Based on the data of 2018, the overall lifetime risk of developing a non-malignant brain and other CNS tumour was 1 in 136 and that of developing a malignant one was 1 in 395.

根據2018年的數據，估計患上非惡性腦及其他中樞神經系統腫瘤的一生累積風險為136分之1，而患上惡性腫瘤的一生累積風險為395分之1。

Remarks 註解：

1. Excludes primary CNS lymphoma which is categorised as non-Hodgkin lymphoma.

不包括原發性中樞神經系統淋巴瘤，此類腫瘤被歸類為非霍奇金淋巴瘤。

2. All rates are expressed per 100,000 population.

所有發病及死亡率均以每十萬人口計算。

3. Rates are standardised to the age distribution of the World Standard Population of Segi (1960). Comparisons with these rates from other sources are valid only under the same standard population for calculations.

年齡標準化發病/死亡率是根據 Segi (1960) 世界標準人口計算。用於進行比較不同人群之間的疾病率時，需以同一標準人口為基準計算才有意義。

4. Subtotal and total of percentages and rates may be different from the add-up values due to rounding.

由於四捨五入的關係，百分比和比率的小計和總計可能與累加值不同。
