[1] Age-standardised rates (ASR) are age-adjusted to the World Standard Population of Segi (1960) and expressed per 100,000 population. Comparisons with these rates from other sources are valid only under the same standard population for calculations.
年齡標準化比率是根據 Segi (1960) 世界標準人口並以每十萬人口計算。用於進行比較不同族群之間的疾病率時，需以同一標準人口為基準計算才有意義。

[2] Average Annual Percent Change of ASR is a summary measure of the trend over a specified interval (* represents statistically significant at the 0.05 level). For details, please refer to the glossary in HKCaR website (www3.ha.org.hk/cancereg/glossary.html#aapc).
ASR的平均每年百分比變化是基於特定年期的數據進行計算來總結過往趨勢的測量工具(* 號代表於0.05水平上達至統計顯著)。有關詳情請參閱 HKCaR 網站內的詞彙表 (www3.ha.org.hk/cancereg/tc/glossary.html#aapc)。

[3] Relative survival (RS) is the proportion of cancer patients surviving for a specified time after diagnosis of cancer, compared to people without cancer in general population. RS is the most commonly used method to measure survival of people with cancer in a population.
相對存活率是指與相同性別和年齡的一般人口比較後的存活百分比。這是計算以人口為基礎的癌症患者存活率中最常用的方法。
