

Dr Jiro OKOCHI

Tatsumanosato Geriatric Health Services  
Facility, Daitou, Osaka, Japan

Dr. Okochi's main area of interest lies in the classification systems for geriatric and rehabilitation care. His work focuses on the adaptation of International Classification of Functioning (ICF) codes into health care systems.

He has participated in numerous studies related to the reliability of ICF codes and qualifiers in geriatric and rehabilitation care. He has also worked intensely with assessing the efficiency of some of the current systems for measuring resource utilization for functional assessment of patients.

At the recent Patient Classification Systems International (PCSI) working conference, Dr. Okochi was a presenter on the topic "Casemix beyond the acute sector" discussing issues related to "How to make a simple classification system for geriatric and rehabilitation care".
