**Introduction**

**Objectives**

Standardization of cleansing, disinfection and sterilization methods of general medical equipment and items

**Methodology**

1) Conducted hospital-wide survey on reprocessing of general medical equipment and items.  
2) Standardized the cleansing, disinfection and sterilization methods of general medical equipment with the review and engagement of relevant parties  
3) Re-educated staff on new methods of cleansing, disinfection and sterilization.

**Result**

1) Document of "Cleansing and disinfection instructions for general items & equipment" has been uploaded on the infection control web page for staff reference and necessary actions.  
2) Cease disinfection and sterilization of general medical equipment in clinical patient areas  
3) High level disinfection for gynaecological USG probe in X-ray department and Specialist Out-patient department.
