

# **Three-tier collaboration in wound care management in community**

**NGAN Hau Lan**

**Nurse Consultant, KEC  
(Wound & Stoma Care)**

**7 May 2014**

# Three-tier collaboration model

# Objectives

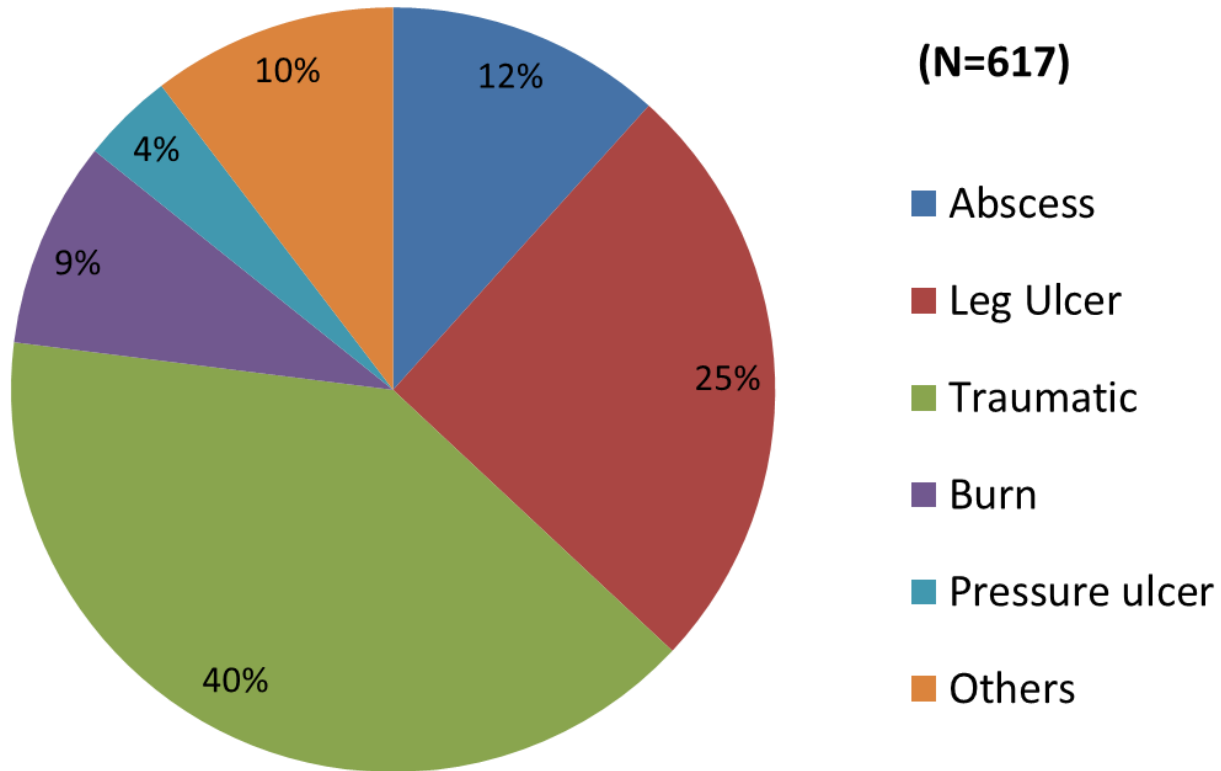

---

- ▶ Provide advanced wound care management
- ▶ Improve quality of care and clinical outcome
- ▶ Provide continuity of wound care at basic, intermediate and advanced level
- ▶ Decrease dressing frequency in GOPCs

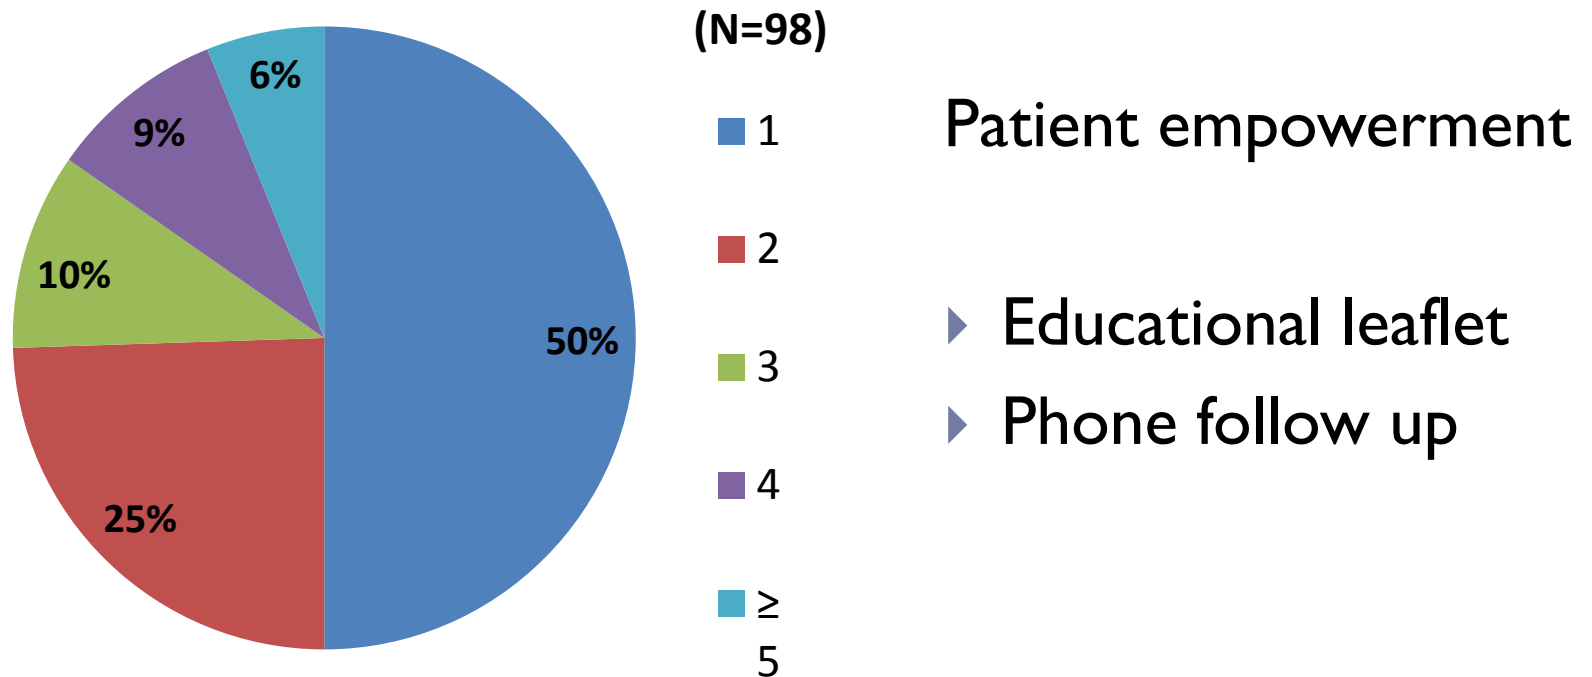

# Outcome measures : 10/2011 to 9/2013

## ▶ Wound type

# Venous Leg ulcer episode

---

# Overall patient outcome at discharge

---

## Refer to advanced level (cases review)

---

- ▶ Rt loin abscess for 13 months, CT finding : Skin abscess + buttock sinus
- ▶ Healed venous leg ulcer for surgery
- ▶ Wound biopsy: 3 cases → Cancer

BCC

Malignant melanoma

# Conclusion

---

Three-tier collaboration model of NAHC- Wound Care Programme in KEC could provide

- ▶ Effective approach to promote wound healing
- ▶ Maintain continuity of wound care
- ▶ Address patients' complicated problems promptly in community setting
- ▶ Decrease patient dressing frequency
