

**Topic: Experience & Evaluation of a
Transition Care Program for
Adolescents with Diabetes Mellitus
type I and II**

(Presentation No.: SPP-P3.19)

Lau Sau Lai,
APN,
P&AM Department,
U.C.H.

● Objectives:

Review the experience & evaluate of the program.

● Methodology:

1. A survey by questionnaire during the transition period in 2011 to 2014
2. A post-transition phone survey in 2014

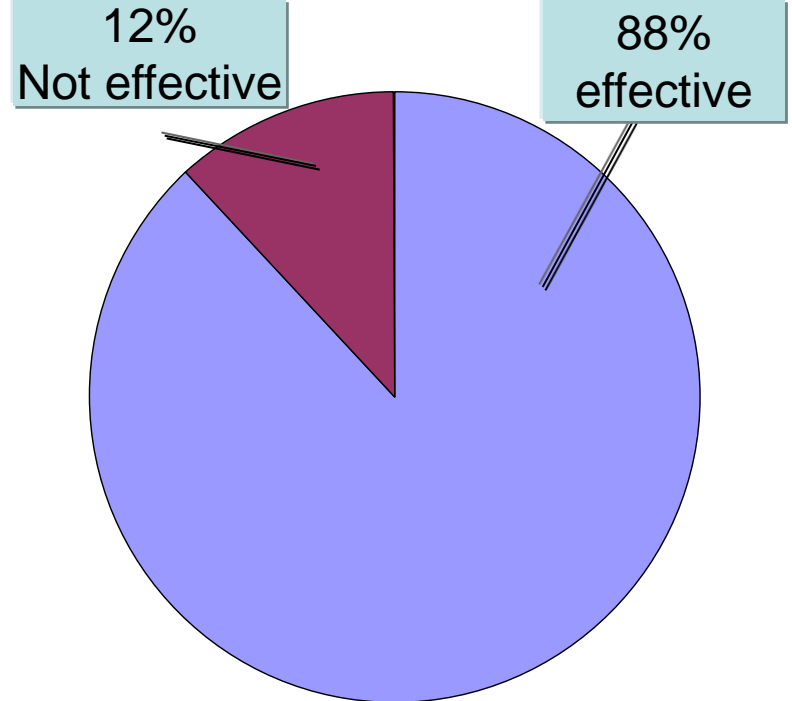

Results:

Patient Satisfaction:
Post-transition Phone Survey

Caregiver: Program
Effectiveness

Results:

- Survey during transition:
 - 88% of care-givers found the program was effective in ↑ patients' coping in adult service.
 - 77% of patients who felt program important said that program ↓ anxiety
- Post-transition survey:
 - 83% of patients found that the program was satisfactory

Conclusion:

The program was effective in helping patients and their caregivers for the transition to the adult service.
