A phone follow service for reduce recurrent of healing venous leg ulcer

Ngan HL, Fung LC, Lam WS

Keywords:

Health education

Venous leg ulcer

Introduction

In Australia, Baker et reported 76% of venous leg ulcers were recurrent. In Scotland, Callam et noted a recurrence rate of 67% for venous leg ulcers. There are many risk factors for venous leg ulcer patients suffered from wound recurrent. In 2012, the wound and stoma care team of UCH provided the phone follow up service to healing venous leg ulcer patients for reduce the recurrence and early detect for providing wound management service.

Objectives

(1)To provide health education for reduce risk factors of venous leg ulcer recurrent.

(2)To early detect the recurrence for providing treatment.
