Introduction

New trend of infectious disease and new policies on infection control push us to adopt innovations of theatre cleansing against infection.

Objectives

A theatre-cleansing program was introduced in order to keep up to date with the trend of infectious disease and new policies on infection control and better resource management.

Methodology

For service expansion, the new idea of outsourcing service for theatre cleansing was introduced in PWH at Oct 2010. Then our department adopted changes on a new infection control concept (such as 5 color zone and use of disinfectant), a new training program for workmen (such as log book), and a partnership of our department and outsourcing company in monitoring and supervision on workmen performance on theatre cleansing.

Result

A positive result from an external auditor about environmental and theatre cleansing in PWH OT was granted from Accreditation on Sept 2013.
