To minimize urethral injury by bladder ultrasound

Chiu FS(1)

(1)B2 Urology ward, Surgical Unit, Tuen Mun Hospital

Keywords:

Bladder ultrasound

Urethral injury

Foley Catheter

Introduction

Objectives

Enhance Patient safety:

To ensure foley's balloon is inside patients' bladder by using the bladder ultrasound to minimize urethral injury

Methodology

For the difficulty urinary catheter insertion patients,bladder ultrasounds were performed to confirm the foley balloon inside the bladder.

Result

The number of false tract insertion of foley catheter can be minimized None of the patients has false tract foley insertion after the bladder ultrasound program.
