Keywords:

Signage

Introduction

Signage card is one of the effective communication tools for healthcare professions in clinical practice. Patient's clinical condition is changing throughout the hospitalization. So, timely update of the signage card over patient's bed head is crucial for our patient care and safety.

Objectives

#NAME?

Methodology

A tailor made signage box is designed. The signage box is made by acrylic plate(\$270/each, photo is attached). Each signage box carry 12 different cards. It is located on the six documentation carts to facilitate nurse to update the cards quickly.

Result

Timely signage updates, save nurses time and enhance communication in healthcare professions which in turn improve the quality of patient care. For example, "Fall risk" identifier ensures our awareness on patient's fall prevention.
