Advice on Synthetic Cast Care

鳴謝 Acknowledgement

新界西醫院聯網 **New Territories West Cluster**

病人啟力基金 Patient Empowerment Programme

Before drying up of cast:

- 1 Avoid knocking cast against hard surface. Support cast with soft material e.g. pillow.
- 2 Do not move joint underneath the cast.
- 3 No weight bearing until cast is dry and hard.
- 4 Allow 15-30 minutes for cast to dry up in a well-ventilated environment.
- 5 Keep cast away from heat.

After drying up of cast:

- 1 Prevent cast from getting wet. Cover cast with a plastic bag when taking a bath.
- 2 Do not use any device to scratch itchy skin underneath the cast.
- 3 Avoid placing any detergent or disinfectant into the cast. Wipe soiled surface with a damp cloth.
- 4 Never walk on cast without walking heel. Follow instruction on walking aid from physiotherapist.
- 5 Rough edge of cast can be trimmed by nail file or sandpaper.
- 6 Dry with a hair dryer on cool setting if cast gets wet.

- Elevate affected limb at heart level to facilitate blood circulation and reduce swelling.
- Perform exercise according to instruction of physician and physiotherapist to prevent joint stiffness and swelling, and to promote healing.
- Follow up as scheduled. Never attempt to alter or remove cast.
- Report immediately if:
 - 1 there is increased and persistent pain.
 - affected area develop tingling or numbness sensation, decreased movement, become swollen, blue or pale.
 - 3 there is foul smell or discharge from cast.
 - a cast become too tight, too loose or cracked.
