# Kai Tak Hospital

Kai Tak Hospital (KTH) is one of the projects under the “First Hospital Development Plan” of the Hospital Authority. **Most of the clinical services of the Queen Elizabeth Hospital (QEH) will be relocated to Kai Tak Hospital (KTH) in phases starting from year 2026, with “Specialist Out-patient Clinic Block” (Block 4) and “Oncology Block” (Block 5) being the first to move in and commence services.** Kai Tak Hospital will create synergy with other hospitals in the Kowloon Central Cluster to further improve the public healthcare services in the Kowloon district.

## Service Enhancement

Upon completion, Kai Tak Hospital will be one of the largest acute hospitals in Hong Kong, with a total gross floor area of **500,000 m<sup>2</sup>** with **2,400 beds, 37 operating theatres** and a wide range of clinical services and facilities. After the relocation, Kai Tak Hospital will have the increased capacity to enhance its service volume. For example, **the specialist out-patient services are expected to accommodate over 1.4 million out-patient attendances annually.**

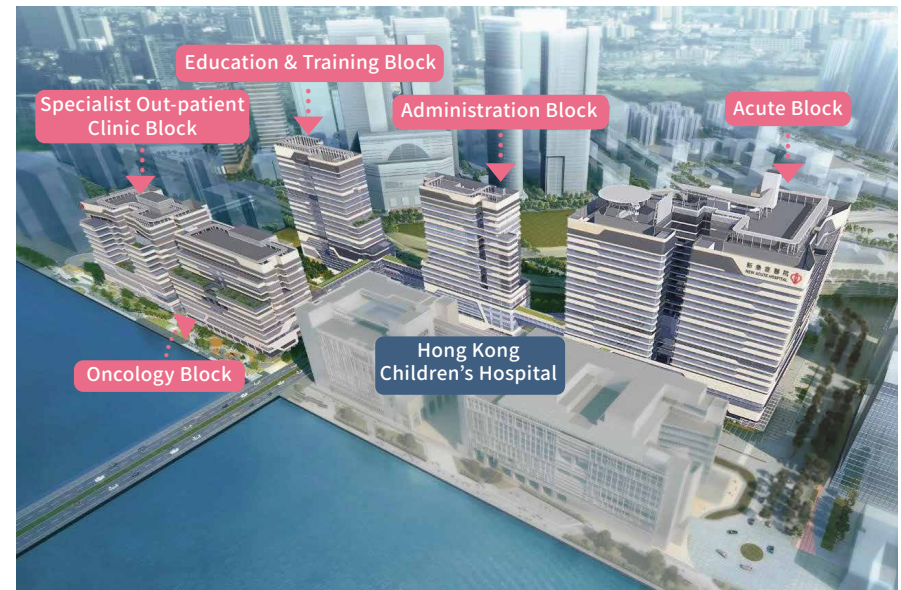

Kai Tak Hospital will be one of the three designated "Trauma Centres" in Hong Kong, providing 24-hour accident and emergency services with comprehensive facilities to handle various types of emergencies, major incidents and disasters. Kai Tak Hospital will also feature a "Neuroscience Centre" and an "Oncology Centre", which consolidate resources and introduce new technologies to benefit patients.

## "5+2" public healthcare complex

Kai Tak Hospital will comprise of five buildings, namely the “Acute Block” (Block 1), “Administration Block” (Block 2), “Education & Training Block” (Block 3), “Specialist Out-patient Clinic Block” (Block 4) and “Oncology Block” (Block 5). Together with the two blocks of Hong Kong Children’s Hospital, which serves as a tertiary referral centre, a “5+2” public healthcare complex will be formed. The functions of the buildings are interconnected, and they are all linked by bridges, which ensures easy accessibility.

## Comfortable and Patient-centred Waiting Experience

Kai Tak Hospital integrates information technology with thoughtfully designed public spaces to foster a comfortable and patient-centred waiting experience.

Patients are encouraged to register for appointments and complete payments either at the hospital’s one-stop electronic kiosks or via the “HA Go” mobile app. The hospital’s design features environmentally friendly features, including expanded green spaces, allowing patients the flexibility to wait away from clinical areas. As their appointment time approaches, the “HA Go” system sends a push notification directly to their mobile device.

Following consultation, patients can obtain a pharmacy queue ticket either from the electronic kiosks or via the EasyQ function in the “HA Go” mobile app. A notification will be sent when their prescribed medication is ready for collection at the pharmacy.
